SWIGGY

DATA ANALYSIS

Exploring orders, ratings, categories, restaurants and revenue

Project by: Apoorva Jaliminchi

Python • SQL Server • Pandas • Matplotlib

ABOUT THE PROJECT

This project analyzes Swiggy order data to understand customer ordering behavior and business performance.

The analysis focuses on:

- Total orders and revenue
- Monthly and quarterly trends
- City and state performance
- Restaurant and dish popularity
- Category-wise order distribution
- Rating and price-range analysis

Dataset Summary

Metric	Value
Total Orders	197,401
Total Revenue	₹53.00 Million
Average Order Price	₹268.50
Average Rating	4.34
Total Restaurants	984
Total Locations	961

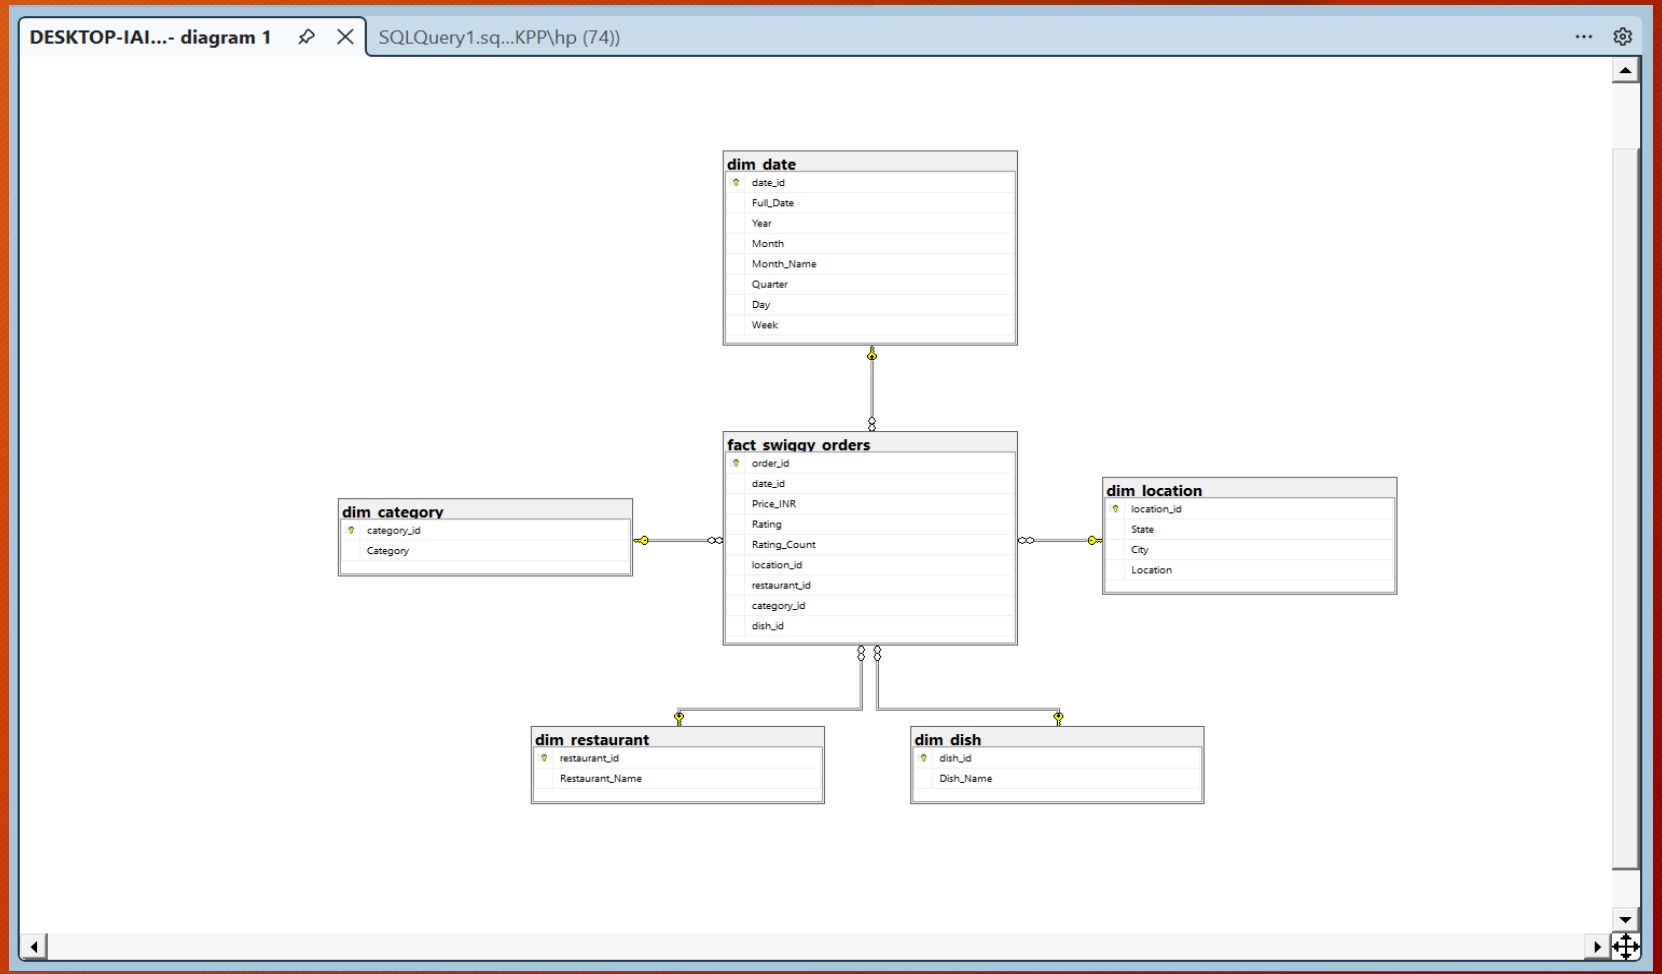

Star Schema Design

Fact Table:

Monthly Order Trends

- January recorded the highest order count, with 25,393 orders.
- February recorded the lowest order count, with 23,291 orders.
- August recorded 25,227 orders.
- The monthly order volume remained relatively consistent across the year.

Quarterly and Yearly Trends

- Total orders in 2025: 197,401
- Q1: 73,084 orders
- Q2: 74,154 orders
- Q3: 50,163 orders
- Saturday recorded the highest weekday order count: 28,933.
- Monday recorded the lowest weekday order count: 27,568.

	year	Quarter	Total_Orders
1	2025	2	74154
2	2025	1	73084
3	2025	3	50163

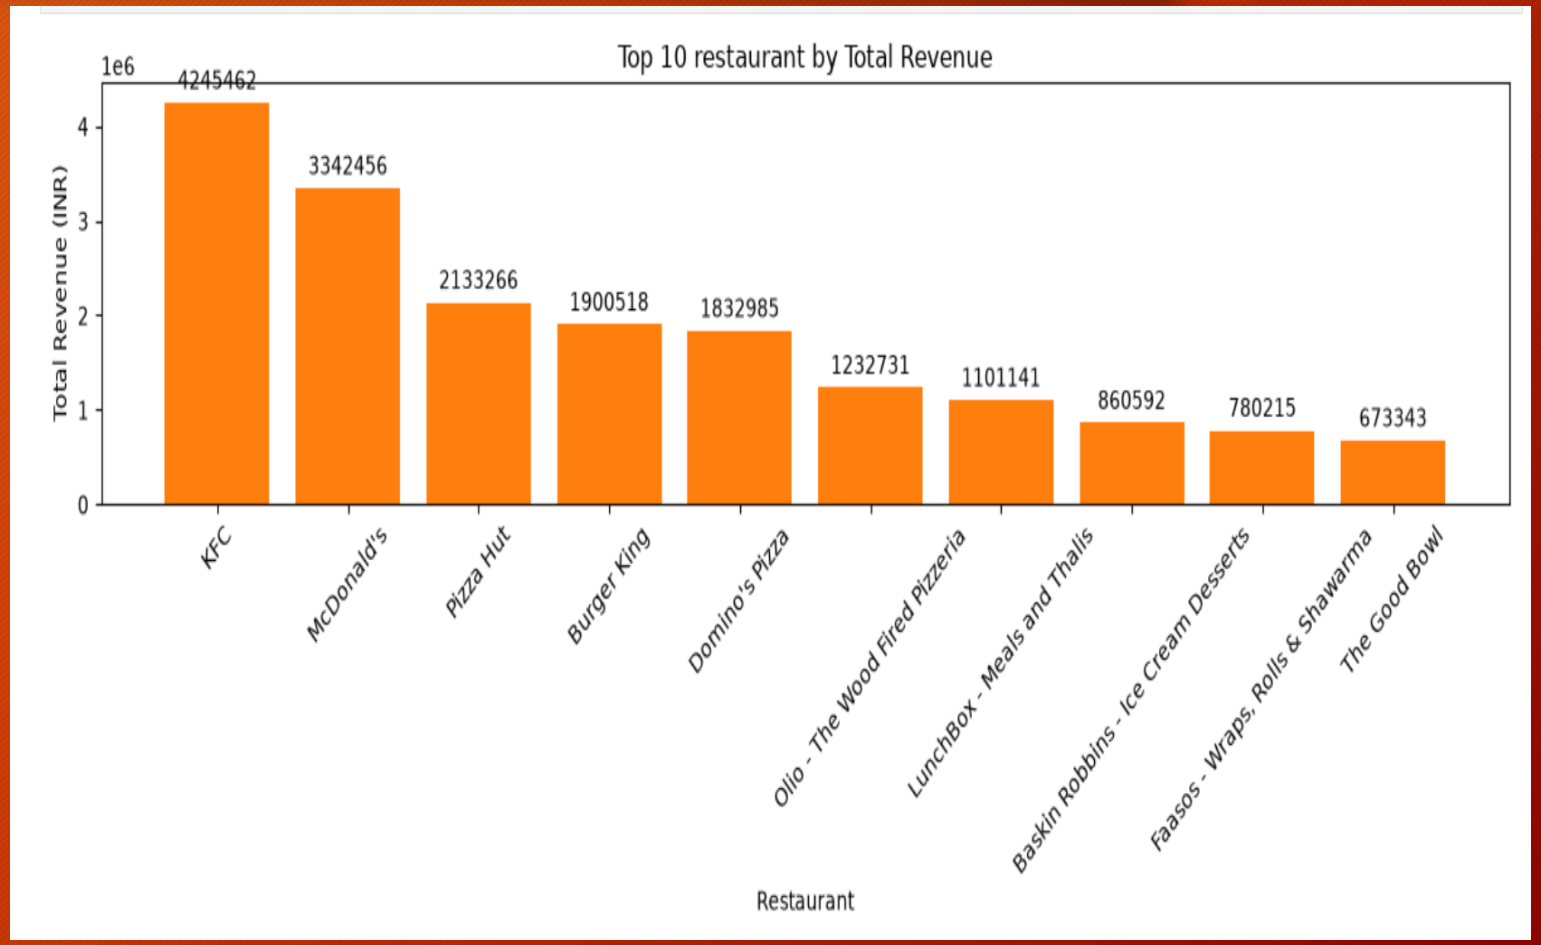

Top Cities by Order Volume and Revenue

- Bengaluru ranked first in order volume, with 20,072 orders.
- Mumbai recorded 10,507 orders.
- Hyderabad recorded 10,308 orders.
- Bengaluru also ranked first in revenue, generating approximately ₹5.46 Million.

	city	Total_revenue
1	Bengaluru	5455887.73
2	Lucknow	3117359.65
3	Hyderabad	3021656.62
4	Mumbai	3015573.35
5	New Delhi	2829180.60
6	Ahmedabad	2815536.27
7	Chandigarh	2804991.82
8	Kolkata	2662213.76
9	Chennai	2642594.63
10	Jaipur	2502833.61

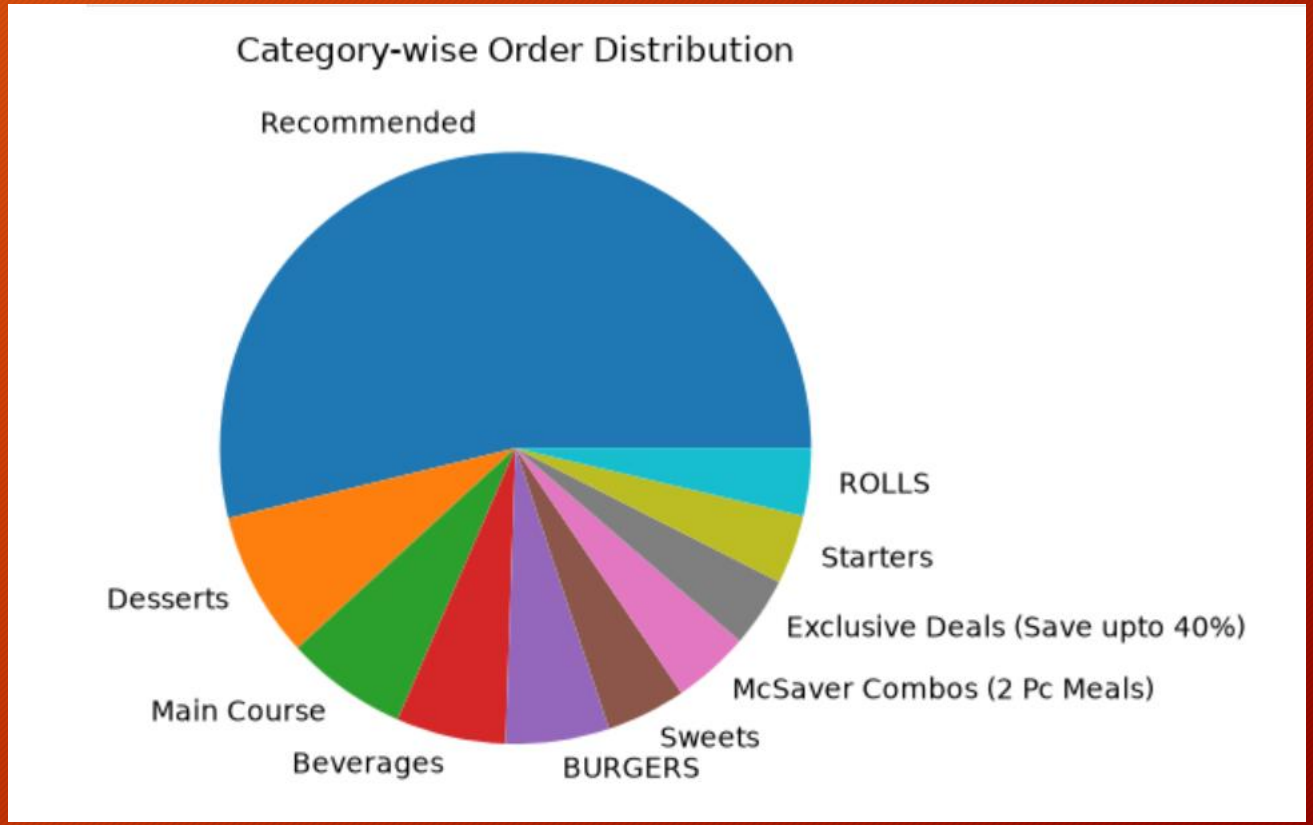

Top 10 Restaurants by Revenue

- KFC ranked first, generating approximately ₹4.25 Million.
- McDonald's ranked second, generating approximately ₹3.34 Million.
- Pizza Hut ranked third, generating approximately ₹2.13 Million.
- Burger King and Domino's Pizza were also among the top revenue-generating restaurants.

Most Popular Categories

- Recommended recorded the highest order count: 24,097.
- Desserts recorded 3,582 orders.
- Main Course recorded 2,983 orders.
- Beverages recorded 2,682 orders.
- BURGERS recorded 2,538 orders.

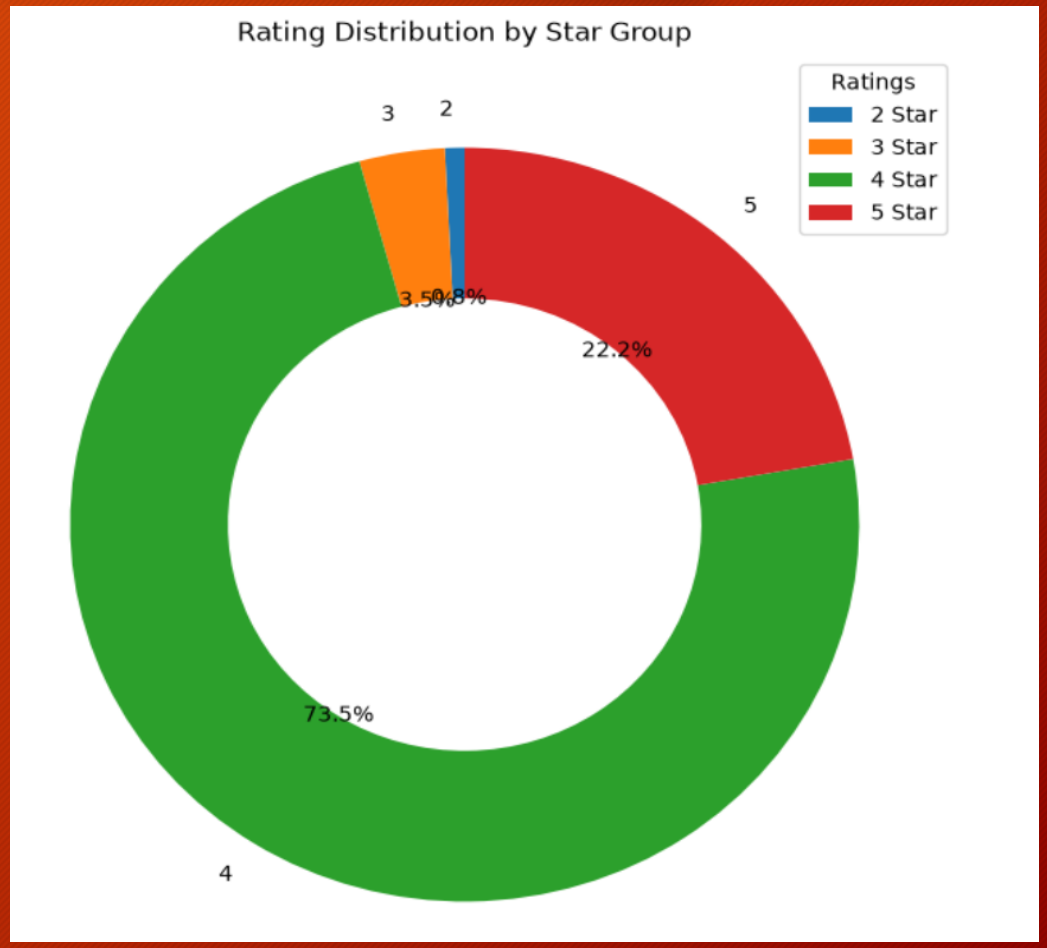

Top 10 Dishes by Order Count

- Veg Fried Rice: 321 orders
- Choco Lava Cake: 303 orders
- Jeera Rice: 265 orders
- Paneer Butter Masala: 262 orders
- French Fries: 248 orders

	dish_name	order_count
1	Veg Fried Rice	321
2	Choco Lava Cake	303
3	Jeera Rice	265
4	Paneer Butter Masala	262
5	French Fries	248
6	Chicken Sausage	230
7	Chicken Fried Rice	228
8	Butter Naan	218
9	Margherita Pizza	203
10	Green Salad	197

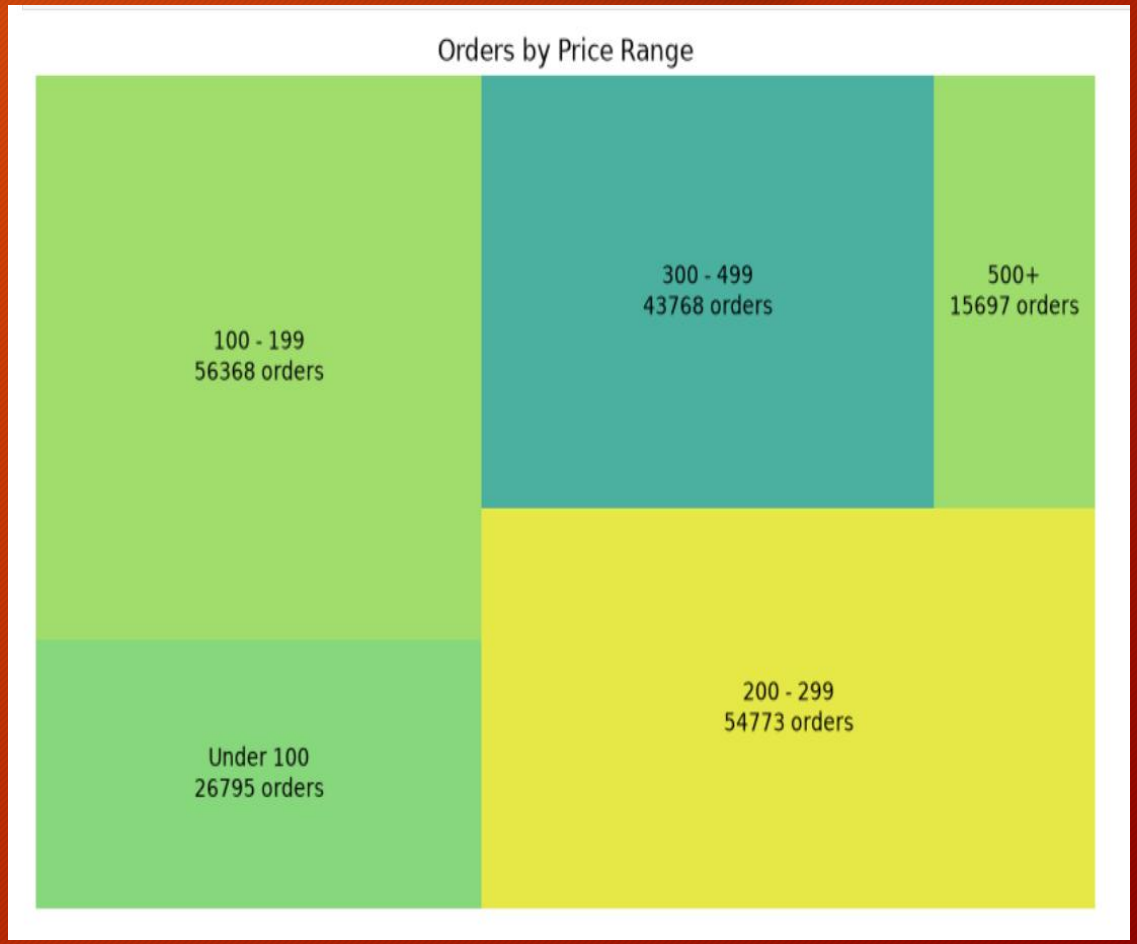

Customer Rating Analysis

- 4-star ratings accounted for 73.5%.
- 5-star ratings accounted for 22.2%.
- 3-star ratings accounted for 3.5%.
- 2-star ratings accounted for 0.8%.
- The supplied rating chart shows that most ratings fall into the 4-star group.

Orders by Price Range

- ₹100–199 was the most common price range.
- ₹200–299 was the second most common.
- ₹500+ had the lowest order count.

Key Insights

Major Findings

- The dataset contains 197,401 orders and approximately ₹53 Million in revenue.
- Bengaluru leads in both order volume and revenue among the reported cities.
- KFC is the highest-revenue restaurant in the top 10 list.
- The Recommended category dominates category-wise order counts.
- Most orders fall within the ₹100–299 price range.
- Ratings are concentrated in the 4-star and 5-star groups.

Conclusion & Future Scope

Conclusion

This project demonstrates how SQL Server and Python can be used to analyze a large food-order dataset. The analysis identifies order trends, leading cities, restaurant revenue, popular categories, and customer rating patterns.

Future Scope

- Build an interactive Power BI dashboard.
- Add filters for city, month, category, and restaurant.
- Analyze customer behavior in more detail.
- Explore revenue forecasting and order prediction using Machine Learning.
